

Steps

// Join train table And station table

// get all rows just for station s1,s2,s3

// group result by train so you all have list of station that train passed by

// select only trains that has the 3 stations

```
_context.tblStation_Train.GetAllAsQueryable().Include(S=>S.Train
).Include(S=>S.Station). Where (S=>S.name == "s1" || S.name=="s2" || S.name ==
"s3" ).groupBy(T=>T.train).where (S=>S.toList().count()==3).select(T=>new
{trainName = T.key.Name}).toList()
```
